

Trokh

AT A GLANCE

Thursday, February 29, 2024

Trokh is the common Aslan language. It was previously the trade language of the Tlaukhu: the twenty-nine ruling clans of the Aslan Hierate. It developed into its present form over 4,500 years ago on Kusyu (Dark Nebula 1226). After the Wave, Trokh splintered, but before Imperial year 1400 the language was tightly controlled by the Tlaukhu, and remained almost entirely free of offshoots, local dialects, or corruptions. Today, the Republic of Regina is host to an Aslan population who speak a variant that is recognizably Trokh, though separated from the original by 700 years.

The complexity of Trokh hampers foreign speakers. A linguist once wrote: "The tongue spoken by the Aslan is both attractive and repellent to the human ear, combining sonorous and melodic vowel sounds with throaty snarls and animal growls, all accompanied by a fair amount of spitting when spoken at any volume." Proper pronunciation of vowels has often proved the most difficult aspect of the language for humans, as some are pronounced while inhaling rather than exhaling. A Trokh speaker can talk faster than a human. He doesn't need to pause for breath in the midst of his speech. Instead, the language itself paces the speaker's breathing, necessitating rapid movement of the diaphragm to change the direction of breath. Indeed, the word trokh means "belly," referring to the motion of the Aslan stomach when speaking.

Introduction

Trokh is a polysynthetic verb-based language. What this means is that the Trokh verb has a number of classes of prefixes and suffixes (twenty classes, to be specific) which modify the verb in a way that can fully express a wide variety of concepts, often without the need for supporting noun phrases. Trokh also has separate grammars based on the gender-role of the speaker: martial-male and economic-female. By necessity this overview is only a brief sketch. In addition, many elements of the Trokh verb – a highly daunting construct – have not yet been recorded, or are only indicated but not translated or itemized here. The documenting of Trokh is a continuing work.

Trokh Sound Inventory

Vowels: A AE AO E EA I O U YA YE IY YO YU

Consonants: F FT H HF HK HL HR HT HW K KH KHT L LR R RL S ST T TL TR W ‘

Note: the ‘ is a glottal stop.

The Trokh Verb

Trokh verbs come with 19 ordered classes of affixes. For example, "TAM" prefixes modify the tense, aspect, or mood of the verb, and come first. Most classes have a few affixes in them. Some are singletons, with only one affix. A few classes have a dozen or more affixes. (This type of construction is called a templatic verb structure.)

Negativizer. There is one affix which can show up anywhere in the verb: the Negativizer affix I'. It negates the sense of the element **after** it. Think of it as the English word "not". For example, I' at the front of the entire verb essentially sticks a "not" in front of its meaning.

Templates. While Trokh vocabulary is gender-neutral, the verb template itself is gender-specific, resulting in two completely different verbal constructions for the exact same meaning.

Female roles use the following verb template:

TAM – P – Ti – Du – Ap – An – M – U – Di – L – O – C – Tr – Verb Stem – Ca – Ad – Ci – It – In – T/A

Male roles have a different affix order:

TAM – Ca – Ap – Du – Ti – P – Ad – In – L – O – C – Tr – Verb Stem – It – Ci – M – U – Di – T/A

TAM: Tense/Aspect/Mood	(see TAM examples)
P: Person	(see Person examples)
Ti: Interval	
Du: Durative	
'eiei-	for a while (used by companies as an "LIC")
Ap: Applicative	Use "person" + tto add a dative agent to an intransitive verb
An: Animative Patient	
kaowea-	animate
ktealea-	sophont
M: Manner	
i'a - <verb>	in the manner of <verb>/being <verb>
U: Absolute Numeracy	
Di: Distributive	
hkei-	variously in time or location
L: Locative	(see Locative examples)
O: Posture	
C: Continuous Motion	
tiysa-	e.g. rolling or sliding
TR: Transitivity	
reaai-	"carrying" sense
toi-	"following" sense
Verb Stem	(see Verb Stem examples)
Ca: Causative	
-ktali	to cause subject to ~
Ad: Andative	used with hortative TAM.
-tlel	"let ~ go off to do ~"
-kheat	"I'm going off to do ~"
Ci: Cislocative	
-aei	already / yet / beforehand
-ea	diminutive "a little", "unimportantly"
-kaola	expansive "a lot", "importantly"
It: Iterative	
-ftal(i)	simple iterative; at intervals
-riht	always / continual / eternal
In: Intensive	
-toeyee	"be going to ~", "preparing to"
T/A: Tense/Aspect	(see T/A examples)

TAM Examples

Past	A' + <affix>	WHY question	Reio
Future	E' + <affix>	Yes/No question	Eiyy
Perfect	Khuia	Imperative	Hloe
Infrequently/Seldom	Eai	NOW Imperative	Hti
Resultative	Wia	Hortative	Khiy
Indicative	Ke'	Prohibitive	Heaw
WHAT question	Tloaei	Potential	Ya
WHERE question	Tliya	Belief	Oa
WHO question	Syelra	Mirative	Ea
HOW question	Htearui	Quotative	Siy

Person Examples

The agent of the action, if there is one, comes first. Next comes the patient or recipient of the action – if there is one.

Person	Male	Female
1	Ai	Ao
1 plural	Wai	Wao
2	Yei	Yao
2 dual	Tyei	Tyao
2 plural	Ayei	Ayao
3	Hei	Hao
3 plural	Khei	Khao

Locative Examples

Above, Up	kiyoi	Join	fya
Advancing	yaei	Land, ground	uiiy
Air	leisiy	Liquid	hlirea
Arrive/Enter	wao	Middle	aio
Around	htowaa	Nearby	ra
Behind	tuiaui	Out of sight	raoua
Beside	iu	Over	ktea
Circling	htarai	Retreating	waw
Crossing	raiai	Split	hwarl
Depart/Leave	kha	Sticking up	khehe
Downward	eaea	Suspended	aye
Flame-ward	waaoya	Together	hlaie
Following	iyaoi	Under	iy
In	yeui		

T/A Examples

Future, simple	hei'ui
Habitual	ee
Imperfective*	tlaiye
Perfect, simple	seha
Perfect, "over there"	kaosiy

*(the Imperfective, when combined with the indicative mood or progressive or habitual aspect, is a progressive marker).

Verb Stems

Appropriate, be	tai	Grandparent, be	teya
Ask permission	toawe	Handle Carefully	hkheiyafyai
Bargain for	wyoea	Haunt	'ao
Be (estar)	'e	Hunt	lifakht
Be (ser)	s'e	Inspect	hrolye
Border sth	soiste	Interdict	hleaa
Born, be	feiao	Jump	kyaea
Chase; Pursue	tyew	Land (planetary)	ryukha
Civilized, be	wihte	Named, Called (be)	kto'yu
Confirm sth	khoa	Negotiate for	hkilroue
Confuse sth	htarii'kh	Pardon	lao
Defend sth	khya	Pass through	uaeuhrek
Dishonor	kta	Pilot; Fly	fiyai
Divide	eau	Pounce; Attack	ktir
Drink	khtaw	Repair sth	tyus
Eat	hkaos	Return	kesiy
Encounter; fight	wea'	Shine	haloia
First, be	teisi, htasi	Shoot at	laryeea
Float	yayuue	Strong, be	ftaei
Free, be	tyer	Third, be	hihte
Game, play a -	tlea	Trade	sa'i
Gather	ftier	Understand	khar
Gathering booty	tlesi	Wait for sth.	uitoye
Go	oui		

Building New Verbs

Trokh verb morphology has a rich set of productions that lets people create new verbs within its own grammar rules. In this example, we create a new verb "to confuse something".

Stem: khar, understand
 Negative: i'khar, not understand
 "Circling" locative: htarii'khar, head-spin-worthy non-comprehend = confuse.

That can be used as-is. But, that's a long verb. If you want a shorter verb root, just erode it a bit. For example, assume the center 'a' goes first.

htarii'khar

Next, maybe the final -ar

htarii'kh

Nice. Let's keep it. So:

htarii'kh: To confuse something.

Adjectives

Prefixing ua' to a verb stem often makes it an adjective. Adjectives (and other nouns) modify nouns in the same manner as English (ice box, house cat, rubber band, broken arrow).

Examples:

Verb	Adjective
Haloia (shine)	Ua'haloia (bright)
Ktyaea (jump)	Ua'ktyaea (jump-capable)
Hwarls'e (split)	Ua'hwarls'e (broken)
Hta (galaxy)	Ua'hta (galactic)

The Trokh Sentence

The structure of the Trokh sentence is: Verb – Object – Indirect Object, with the subject (and sometimes the applicative object) embedded into the "Person" slot of the verb, or its pronoun.

Nouns

Nouns can modify other nouns, in the same manner as English (ice box; house cat; rubber band).

Anglic; human	(Tr)arlaaya	Gvurrdon	(Tra)warliiya
Barbarian	Tahiwihteakhtau	Head of Pride	Khtyei
Battle; encounter	Wea'khto	Land	Hatei
Belly	Trokh	Land Defender	Hateikhyair
Borough, district	Ha	People	Hyu
Clan	Huiha	Pride	Ahriy
Council	Tlaukhu	Rights	Hyah
Day	Aloiakht	Rite of Passage	Akuaeuhrekhyeh
Defender	Khyair	River	Lay
Duel of honor	Aisailaokhe	Squadron	Hryo
Dewclaw	Aisai	Story; Tale	Ktaee
Empire	Akhwihteair	Sun	Tye
Equipment	Steasyo	Traitor	(Ao)uoauye
Family	Ekho	Valley	Kteli
Galaxy	Hta	Vassal	Fiy

Noun Classifiers

Noun Prefixes

An optional class of prefixes can nuance the meaning of nouns.

Prefix	Meaning	Example
Ahk-	Honorable	Akhuaeuhrekhyeh, rite of passage
Ekh-	Honorable disagreement	
Akya-	anti; a threat	Akyafteirleao, a heresy or threat to Aslan culture
Tah-	without; lacking	Tahwihteakhau, barbarians lacking civilization
Khih-	with	

Verb Nominalization

A verb stem can be turned into a noun.

Suffix	Meaning	Examples
-le	Gerund, -"ing"	ftierle, a gathering
-leao	Quality, nature, culture, -ness	ftierleao, Aslan culture; ftaeileao, strength
-khto	Event	ktirkhto, a pouncing
-tyu	Land	ktirtyu, pouncing grounds
-sea	Land, uncultivated	ktirseas, wilderness pouncing grounds
-stea	Land, conquered	ktirstea, newly acquired pouncing grounds
-khau	People	ktirkhau, a pouncing people
-ir, ua	Honorable actor	ktirir or ktirua, honorable pouncer person
-'hao	Dishonorable actor	ktir'hao, dishonorable pouncer person

Numbers

Numbers here are given in base ten. When going over Aslan accounting books, please remember that Aslan write in base eight.

0	Khte	19	lyr-kheh
1	Alr	20	lyr-hryeh
2	Hlai	21	lyr-khu
3	Kheh	22	lyr-yo
4	Hryeh	23	lyr-koih
5	Khu	24	Tlau
6	Hryo	29	Tlaukhu
7	Koih	30	Tlauryo
8	Tea	32	Starl
9	Te-alr	40	Hea
10	Te-hlai	48	Tyerl
11	Te-kheh	49	Tyerlaln
12	Te-hryeh	50	Tyerlai
13	Te-khu	56	Fairl
14	Te-hryo	60	Fairhyeh
15	Te-koih	64	Khaulea
16	lyrl	70	Khaulea hryo
17	lyr-alr	128	Hlalea
18	lyr-hlai	196	Huakhea

First	Hta	Fifth	Khuao
Second	lha	Sixth	Hryao
Third	Hiha	Seventh	Koihao
Fourth	Hryeao	Eighth	Teao

Higher ordinals are created by adding -ao to the end of the numeral. For example 'ninth' is Tealrao.

Numeral Classifiers

Counting requires the use of numeral classifiers, which specify the class of items being counted; the numeral cannot appear without an accompanying classifier. Class is usually assigned according to whether the object is animate or inanimate or according to an object's general shape. Thus when counting "flat" objects, a different form of numeral classifier is used than when counting round things, oblong items or people. Trokh has both numeral classifiers and noun classifiers; the noun classifiers can also be used as pronouns.

The meaning denoted by a noun may be altered significantly by changing the accompanying classifier. For example, when the classifier -yeyo is used with names of plants it is understood that the objects being enumerated are whole trees. If in this expression a different classifier, -siy (for counting long, slender objects) is substituted for -yeyo, this conveys the meaning that only sticks or branches of the tree are being counted.

Time

Unit	Span	Name
Aslan Year	~320 days	Ftahea
Aslan Day	~36 hours	Eakhau
Aslan Hour	~137 min	Tekhaao
Period	1024 sec / ~17 min	Khtauaao
Sprint	16 sec	Areiaao
Breath	2 sec	Uealao

Conjunctions

And	'eya
But	'ftiai
Or	'ua

Interjections

Yes	Htuiiya
No	Aieaeyo
\$#!%	Tua
!@#\$	Hfeh
&%\$#	Wea'ea

In the following examples, the verb stem is artificially hyphenated. This technique is sometimes helpful to non-Aslan trying to understand Trokh. All of these examples use the female-template grammar with male prounous (appropriate and common use for language-learners).

Tloaei-yei-kto'yu-tlaiye
What is your name?

Ai-kto'tu-tlaiye _____.
My name is _____.

Ke'airaouai'wihteakaolariht.
I'm sorry. (Lit., I am a very unsightly, perpetual, incurable barbarian.)

l'a'siyhei-ktyaee-ktaliaeitoyeeakaosiy.
He did not say that [someone or something] had yet caused him to be prepared to jump over there.

Ke'rektyeituiaui-ktirle-eetlaiye ktarla'hao.
The ship behind you, the traitor, is attacking you.

Htiyei'iyetiysa-fiyai-kaolatoeyee!
Pilot, prepare to execute an immediate hard z-axis roll!

E'kheihha-teisi-seha 'eya e'kheihta-hihte-seha.
The third shall be first, and the first shall be third. [Aslan proverb]

Tliyatyew'haoheisa'iuakhaohkei-ktir-aeiee?
Where and when has the corsair tended to attack traders before?

Ke'kheii'atyerhkeifeiaorhtseha khiih akhhyah.
All people are born free with honorable rights ("honorable rights" is a gloss for "equal in dignity and rights").

Ke'waitaitlaiye! Greetings!
Yayeilao. Pardon me.

Tiya'e... Where is...
...khtirtyu? the/a pub?
...Lifakhtyu? the Hiring Hall?
...Sa'ityu? the Trader's Guild?
...Hketoyetyu? the TAS Hostel?

Yei'iu'e. It's here.
Yei'ekaosiy. It's over there.

Aikhar / Aokhar. I [m] understand you [m/f].
Yeikhar / Yaokhar. I [f] understand you [m/f].

Aii'khar / Aoi'khar. I [m] don't understand you [m/f].
Yei'khar / Yaoi'khar. I [f] don't understand you [m/f].

Aiyeawl lyryeh roue'hao. I [m] have twenty credits.

In the following examples, I show how one center particle changes the sense of the question.

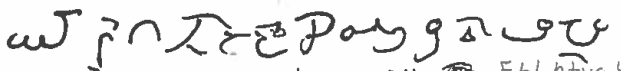

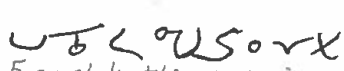

Tloaeiayeiywoea. What's the price quote?
Tloaeiayeikhawwoea. What's this ridiculous price you're trying to foist on me/us?
Tloaeiayeihtaraiwoea. What price are we getting nowhere on deciding on then?
Tloaeiayeihlowaawwoea. What's the price you say it should be?
Tloaeiayeihliaewwoea. What's the price (that we're working out)?
Tloaeiayeiwaoewwoea. What's the final price then?
Tloaeiayeifyawwoea. Hey, what's the price (I'm joining in on the haggling)?

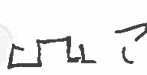

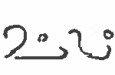

THE ASLAN WRITING SYSTEM

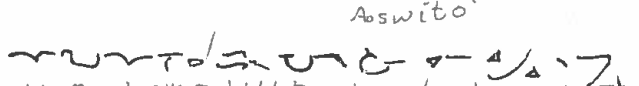

This writing system was reverse-engineered from Traveller materials from the 1980s, which typically had strange, semi-cursive writing shown on the sides of Aslan starships, vehicles, and ceremonial clothing. Taking these as an alphabet used to write Trokh, I did a best-guess mapping to the Trokh sound system, then tested it out with satisfactory results.

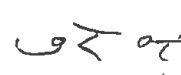

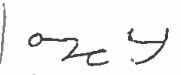

The subsequent pages summarize my guesstimates. First is my Trokh alphabet, then a few samples copied from illustrations and then translated into Roman letters, and a few Trokh starship names written using Aslan letters.
